

Carry Your Vision into the World: Vision Cuts a Swath Through Chaos

Your vision is the overall direction in which your life is moving—the place where your values meet your deepest burning desires. It's the place where you perform the utmost service to humankind by being who you're truly meant to be. I am not talking about your goals, though goals play a part in your vision. It's not a destination, per se, because there's no end point for the journey, save death. It goes on as long as you do. Your vision gives a context to your journey—it gives the whole process a focal point. It's you as an engine, you as a rocket. It's you making a difference in the world by knowing yourself well enough to know the difference you're here to make.

Propel Your Vision: These 8 Key Catalysts Keep You Moving Forward

Quantum Success requires a coming together of all three elements. Vision without principles becomes ruthless. It can get so wrapped up in its own creation that it damages others, and in so doing, destroys its own mission, which is to serve. The 8 Key Catalysts, which you'll discover in Part Three, are to human life what gravity and the laws of matter are to the universe. They are the driving forces that propel our lives, and once you know how to harness them, they'll work for you.

These 8 Key Catalysts keep your journey true. In the midst of massive adaptation and knowledge acquisition, they help you remain focused on the *reasons* you're learning all this stuff. I use the term *Key Catalysts* to describe them because they are the “keys” to making our visions worth realizing, and the “catalysts” that turn random energy into directed energy, just as a propulsion system on a rocket takes an explosion and turns it into a launch.
